Ex No: 1 Comparative study of low code development versus traditional application development approaches

Aim:

To compare traditional application development and low code application development based on their features, advantages and disadvantages.

Features of traditional vs low code:

Traditional Development	Low-code Development
=> Required programming Knowledge	=> Minimal coding Required
=> Developed using languages like java, python, C#, etc.	=> uses drag and drop interface
=> Longer development time	=> faster development time
=> High flexibility and customization	=> Limited customization
=> Suitable for complex application	=> Suitable for simple to medium business application

Advantage of traditional vs low code:

Traditional Development:

=> Highly customizable

=> Suitable for large and complex projects.

=> Better control over application design and performance

=> Supports advantage integrations

Low code Development:

=> Faster application development

=> Required less coding knowledge

=> Reduces development cost

=> Easy maintenance and updates.

Disadvantages of traditional vs low code:

Traditional Development:

=> Time consuming

=> Requires skilled developers.

=> Higher development and maintenance cost

=> longer testing and deployment process

Low code Development:

=> Limited customization option

=> Vendor dependency

=> May not be suitable for highly complex application.

=> Licensing costs for enterprise platforms

Comparison of traditional vs low code:

Traditional Development	low code development
=> Takes more time to develop applications.	=> Develops applications much faster.
=> Requires Strong programming Skills	=> Requires little or no programming knowledge
=> Highly flexible and customizable	=> Limited customization options
=> Higher development & maintenance cost	=> lower development & maintenance cost.

Result:

Traditional development offers high flexibility and customization, while low-code development enables faster application development with minimal coding. The suitable approach depends on the projects requirements.
