Sports Management System – Zoho Creator Project Report

1. Project Title

Sports Management System – A Digital Platform for Managing Sports Activities and Events

2. Project Description

The Sports Management System is a Zoho Creator application designed to manage sports events, student registrations, team participation, and match schedules within a college or institution.

The application allows students to register for sports, coordinators to organize events, and administrators to track participation and results. It uses Deluge scripts for validation, reports for monitoring registrations, workflows for notifications, and AI-assisted features for sports recommendations and performance summaries.

3. Objectives

- Simplify sports event registration and management.
- Maintain student and sports event details.
- Prevent duplicate registrations.
- Manage match schedules and participation.
- Send automatic notifications about event updates.
- Use AI-assisted suggestions to recommend suitable sports.

4. Forms Used

Form 1: Student Sports Registration

Purpose: To collect student information and sports preferences.

Field Name	Field Type
Student ID	Auto Number
Student Name	Single Line
Email Address	Email
Department	Dropdown
Year of Study	Dropdown
Sport Interested	Multi-select
Playing Position	Dropdown
Skill Level	Dropdown
Availability	Checkbox
Previous Experience	Multi Line
AI Sports Recommendation	AI-assisted field or integration

Field categories:

- **Basic fields:** Student Name, Email Address, Department, Year of Study.
- **Advanced fields:** Auto Number, Multi-select, Checkbox, Multi Line.

- **AI field:** AI Sports Recommendation, if AI functionality or an external integration is available.

Form 2: Sports Event Registration

Purpose: To register students for sports events and manage participation.

Field Name	Field Type
Registration ID	Auto Number
Student	Lookup to Student Sports Registration
Event Name	Dropdown
Sport Type	Dropdown
Event Date	Date
Team Name	Single Line
Participation Category	Dropdown
Registration Status	Dropdown
Match Result	Dropdown
Performance Score	Number
AI Performance Summary	AI-assisted field or integration

Field categories:

- **Basic fields:** Event Name, Sport Type, Event Date, Team Name.
- **Advanced fields:** Auto Number, Lookup, Number, Dropdown.
- **AI field:** AI Performance Summary, if AI functionality or an external integration is available.

5. Dataset and Report

Report Name: Sports_Event_Report
Purpose: To display and monitor sports registrations and event details.
Report type: List Report
Data source: Sports Event Registration form.

Columns displayed:

- Registration ID
- Student
- Event Name
- Sport Type
- Event Date
- Team Name
- Registration Status
- Match Result
- Performance Score

Filters:

- Sport Type
- Event Date
- Registration Status

- Department
- Event Name

Benefits:

- View all sports registrations in one place.
- Track confirmed and pending registrations.
- Monitor event participation and results.
- Filter records for specific sports and dates.

6. Three Deluge Scripts

Script 1: Prevent Duplicate Registration

Purpose: To prevent the same student from registering for the same event more than once.

Implementation note: Use the actual field link names in your form. The following is illustrative; the duplicate search criteria must match the student's lookup ID and event name.

```
existing = Sports_Event_Registration[
    Student == input.Student &&
    Event_Name == input.Event_Name
];

if(existing.count() > 0)
{
    alert "You have already registered for this event.";
    cancel submit;
}
```

Script 2: Validate Event Date

Purpose: To prevent registration for past event dates.

```
if(input.Event_Date < zoho.currentdate)
{
    alert "Please select a current or future event date.";
    cancel submit;
}
```

Script 3: Update Registration Status

Purpose: To provide a confirmation message based on the registration status.

```
if(input.Registration_Status == "Confirmed")
{
    info "Your sports registration is confirmed.";
}
else if(input.Registration_Status == "Rejected")
{
    info "Your sports registration was rejected.";
}
```

Note: Configure the correct execution event and status choices in Zoho Creator. The third script displays a message; it does not independently update another record.

7. Workflow

Workflow Name: Sports_Registration_Notification
Form: Sports Event Registration

Trigger: When a record is created or edited.
Condition: Registration Status changes to Confirmed.

Actions:

- Send an email notification to the registered student.
- Include the event name and event date.
- Provide team or participation details when available.
- Notify the sports coordinator if required.

Expected result: Students receive confirmation when their registration is accepted.

8. AI Features

AI capabilities depend on the Zoho Creator plan and available integrations.

- **Sports Recommendation:** Suggest suitable sports based on interests and experience.
- **Performance Summary:** Summarize recorded performance scores and match results.
- **Skill Analysis:** Identify areas where a player may need improvement.
- **Event Suggestions:** Recommend events based on a student's selected sports.

These features require an available AI field, supported Creator AI feature, or external AI integration. They are not automatically created by adding a normal form field.

9. Application Workflow

1. **Student Sports Registration** – Enter profile and sports preferences
2. **Sports Event Registration** – Select event, date and team
3. **Deluge Validation** – Check duplicate registrations and event dates
4. **Coordinator Review** – Confirm or reject registration
5. **Workflow and Reports** – Send notifications and track results

10. Implementation Steps

1. Create a new application in Zoho Creator.
2. Create the Student Sports Registration form.
3. Add the required basic, advanced, and AI-assisted fields.
4. Create the Sports Event Registration form.
5. Configure the student Lookup field and event details.
6. Add and test the three Deluge scripts.
7. Create the Sports_Event_Report list report.
8. Configure the registration notification workflow.
9. Test duplicate registration, past event dates, status changes, and notifications.
10. Set permissions for students and sports coordinators before publishing.

11. Expected Output

- Students can register their sports interests and events.
- Duplicate event registrations can be prevented.
- Invalid past event dates can be rejected.
- Coordinators can view registrations and results through reports.
- Confirmed registrations can trigger automatic email notifications.
- AI-assisted recommendations and performance summaries can be added when supported.

12. Future Enhancements

- Team formation and player allocation.
- Match scheduling and tournament brackets.
- Scoreboards and leaderboards.
- Attendance tracking.
- Sports equipment management.
- AI-based team and player recommendations.

13. Conclusion

The Sports Management System provides a centralized platform for organizing college sports activities. By combining forms, Deluge scripts, reports, workflows, and optional AI-assisted features, it reduces manual work and improves registration, communication, and event tracking.
