EXPERIMENT 11

Development to Production

Project: Insurance Claim Management using Low-Code in Zoho Creator

AIM

To prepare and verify a controlled release of the Insurance Claim Management application.

REQUIREMENTS

- Development app
- Claim workflow test cases
- Authorized publish or deployment access

DESIGN / MODULES

Stage	Main task
Development	Build forms, reports, workflows
Testing	Check claim submission, review, approval, rejection, and permissions
Production	Publish after checks and approval
Recovery plan	Record a known-good version and recovery steps

PROCEDURE

1. Finish configuring policyholder, policy, claim, and review modules in development.
2. Prepare tests for valid claims, missing documents, expired policies, approval, and rejection.
3. Check notification recipients, connections, access permissions, and environment settings.
4. Use the deployment or publish method available in the current Creator account.
5. Obtain authorized review before release.
6. Run a small post-release test and document the version, date, issues, and recovery approach.

SAMPLE LOGIC / OUTPUT

Release checklist: forms checked; claim statuses checked; role permissions checked; notifications tested; settings reviewed; reviewer approval recorded.

TEST CASES

Test	Expected outcome
Submit a test claim	Record is saved correctly
Claim linked to expired policy	Validation or review rule behaves as configured
Unauthorized user opens admin report	Access denied

RESULT

A release checklist is prepared. State that deployment is complete only after the live publish process is verified.
