EXPERIMENT 14

Pro-Code Custom Functions

Project: Insurance Claim Management using Low-Code in Zoho Creator

AIM

To design a custom function that validates claim details and checks a claim amount against a policy coverage limit.

REQUIREMENTS

- Claims form with claim amount and linked policy
- Policy form with coverage limit and validity dates
- Custom function or workflow action supported by the account

DESIGN / MODULES

Input	Validation / use
Policy reference	Must refer to an existing policy
Claim amount	Must be positive
Policy validity	Claim must be reviewed against applicable dates
Coverage limit	Compare claim amount with the policy limit

PROCEDURE

1. Confirm the actual field link names in the Claims and Policies forms.
2. Create a custom function or workflow action in the supported Deluge editor.
3. Validate that the claim amount is present and positive.
4. Retrieve the linked policy's coverage limit and validity details using the actual form and field link names.
5. Compare the claim amount with the configured limit and route exceptions for review; do not make a final insurance decision solely from this simplified example.
6. Test valid, invalid, expired-policy, and over-limit scenarios before using the function.

SAMPLE LOGIC / OUTPUT

Illustrative logic: if claim amount is positive, retrieve the linked policy limit; if the amount exceeds the limit, flag the claim for review. Actual Deluge syntax and lookup code depend on your form link names.

TEST CASES

Input	Expected outcome
Claim amount 20,000; limit 50,000	Passes the simple amount comparison
Claim amount 70,000; limit 50,000	Flag for review
Claim amount zero or negative	Validation error
Policy details missing	Do not proceed without review

RESULT

The custom-function design and test cases are documented. Adapt and validate the code with the actual Creator schema and approved claim rules.
