EXPERIMENT 15

Careers and Future of Low-Code

Project: Insurance Claim Management using Low-Code in Zoho Creator

AIM

To explore career paths and future skills associated with low-code application development using an Insurance Claim Management project.

REQUIREMENTS

- Understanding of low-code concepts
- Insurance claim workflow summary
- Examples of forms, reports, validation, and automation

DESIGN / MODULES

Role / area	Relevant skills
Low-code developer	Forms, reports, workflows, data modelling
Business analyst	Requirements and process mapping
Automation specialist	Workflow design, testing, integrations
Application administrator	Access control, governance, release management
Solution architect	Integration, scalability, and risk assessment

PROCEDURE

1. Summarize the purpose and main modules of the Insurance Claim Management application.
2. Identify skills demonstrated by forms, reports, status workflows, validation, and dashboards.
3. Explain how developers translate insurer and policyholder requirements into an application.
4. Discuss future-facing skills such as API integration, security, data quality, testing, and custom functions.
5. Explain that low-code reduces repetitive development but does not remove the need for sound design and governance.
6. Prepare a project presentation showing architecture, workflow, limitations, and future enhancements.

SAMPLE LOGIC / OUTPUT

Possible future enhancements: document checklist, claim-status notifications, review dashboard, processing-time reports, and secure integration with document services after review.

TEST CASES

Evaluation area	Evidence to present
Requirements	Map each requirement to a module
Automation	Show a tested workflow or test record
Security	Show role matrix and validation rules
Future scope	List prioritized enhancements and risks

RESULT

The project demonstrates low-code skills relevant to application development, analysis, automation, administration, and solution design.
