EXPERIMENT 08

Users and Role-Based Access Control (RBAC)

Project: Insurance Claim Management using Low-Code in Zoho Creator

AIM

To configure role-based access for policyholders, claim officers, and administrators in an Insurance Claim Management application.

REQUIREMENTS

- Claims and Policies forms
- Roles or permission groups configured in Zoho Creator
- Separate test accounts for permission testing

DESIGN / MODULES

Role	Suggested access
Policyholder	Submit a claim and view only permitted own claim records
Claim Officer	Review claims and update review status or notes
Administrator	Manage policies, users, reports, and application settings

PROCEDURE

1. Identify the roles involved in the claim process.
2. Open the application sharing and permission settings in Zoho Creator.
3. Create or map the roles to the access model supported by the current account.
4. Restrict policy configuration and user administration to authorized administrators.
5. Limit policyholder access to permitted claim records; do not rely only on hiding interface elements.
6. Test view, add, edit, and delete permissions with separate accounts and record the outcomes.

SAMPLE LOGIC / OUTPUT

Permission matrix: Policyholder → submit/view permitted claims; Claim Officer → review and update claim status; Administrator → manage policies and reports.

TEST CASES

Test	Expected outcome
Policyholder opens admin report	Access denied
Claim Officer changes policy settings	Denied unless specifically authorized
Administrator edits policy details	Allowed

RESULT

A role matrix and permission test plan are prepared. Verify all access rules in the live application.
