EXPERIMENT 09

Zia and Built-in Analytics

Project: Insurance Claim Management using Low-Code in Zoho Creator

AIM

To analyze claim records using reports, dashboards, and Zia features where available in Zoho Creator.

REQUIREMENTS

- Sample policies and claims with different statuses
- Reports and dashboard components
- Zia features enabled for the account, if applicable

DESIGN / MODULES

Metric	Purpose
Claims by status	Compare Submitted, Under Review, Approved, and Rejected claims
Claim amount by type	Understand the distribution of claim values
Processing time	Track time between submission and final decision
Approved amount	Summarize approved amounts for a selected period

PROCEDURE

1. Enter sample policy and claim records with different statuses and dates.
2. Create reports grouped by claim status and claim type.
3. Add suitable charts and summary panels to a dashboard.
4. Add filters for claim date, claim type, and status.
5. If Zia analytics is available, test a supported query and compare its output with the source records.
6. If Zia is unavailable, use standard Creator reports and document that limitation.

SAMPLE LOGIC / OUTPUT

Suggested dashboard cards: Total Claims | Under Review | Approved Claims | Total Approved Amount. Populate these from actual application data.

TEST CASES

Test	Expected outcome
Filter status = Approved	Only approved claims are counted
Change date range	Report totals update
Compare dashboard with records	Totals match the underlying report

RESULT

A claim analytics dashboard design is documented. Zia availability and all metrics must be verified in the actual app.
